

## **VICI meeting notes 2009-09-09**

Present: Catholijn, Alina, Pascal, Willem-Paul

Absent: Koen, Dmytro, Wietske, Joost

1. Catholijn mentions that the enddate of the VICI project got prolonged and we can have one more PhD on the project. Koen is working on a proposal for that PhD's topic. Pascal, Catholijn and Koen will sit together and discuss that further.
2. We discussed first ideas for the program of the Steering committee meeting in December. Willem-Paul explains the result from our questionnaire data, namely that it is very important for people whether friends or family members would use the PN. This gave us the idea to design a more social device, with a webportal where friends can comment or give advice to each other about their negotiations. Pascal suggests that that advice could serve as input for Wietske's reasoning system to generate an advice for the next step. These results and the new directions for the PN could be presented in the steering committee alongside the other future plans of the project and interface demos. In November we should have a text about this ready. Before that we will have another meeting discussing more of the content.
3. Dmytro's contract has been prolonged.
4. Willem-Paul mentions that we should write a journal paper including the scenarios, focus groups and the questionnaire. Catholijn says that we should think about a structure and set it up before writing on the paper.
5. Willem-Paul mentions that he also has a master student working on the emotion measurement interface. He is developing different prototypes using e.g. SAM and emotion words to see whether people like to express emotion along the three dimensions (SAM) or as a whole.
6. We need to put the baancode of the group somewhere accessible for everyone (WIKI?)
